

NewsScope

Your Personalized News Companion

Description

NewsScope is a personalized news application that provides its users with the latest news and trends that align with their interests. Its intuitive interface allows users to curate their own news feed by selecting desired categories and keywords. The app keeps users informed and up to date with the latest news and allows them to easily access articles they have bookmarked for later.

Technologies used

- NextJS
- Tailwindcss
- Firebase
- Newsapi

Features to implement

1. User Profiles: Users can create profiles and specify their preferences for news categories, and keywords.
2. News Feed: The app would display a customized news feed based on the user's preferences, showing the most relevant news articles.
3. Article Filtering: Users can further refine their news feed by selecting and deselecting categories, sources, and keywords.
4. Bookmarking: Users can bookmark articles that they want to read later, and the app would keep track of their reading history.
5. Search: Users can search for news articles based on specific topics, keywords.
6. Commenting: Users can post comments on articles, start discussions, and engage with others in real-time.
7. Reactions: Users can express their opinions and reactions to articles by selecting from a range of emojis.
